

Benjamin Louis Ameye

Grosse Pointe, MI • 313-348-1518 • benameye@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

EDUCATION

Lawrence Technological University, *Southfield, MI*

B.S. Computer Science • GPA: 3.64 • Dean's List (2x) *Expected May 2028*

Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Software Design, Web Architecture & Design, Discrete Structures, Probability & Statistics

Certifications: Google Cybersecurity Professional Certificate (Coursera) • AWS Educate: Machine Learning Foundations • Generative AI with AWS

TECHNICAL SKILLS

Languages: C, C++, Python, Rust, JavaScript, SQL

Frameworks & Web: React, HTML/CSS, Flask, spaCy, sentence-transformers, Discord API, Microsoft Graph API

Tools & Platforms: Git, Docker, AWS, Google Cloud Platform, CI/CD Pipelines, Unix/Linux

WORK EXPERIENCE

Office Assistant | Dr. Hernandez Internal Medicine *2023 – Present*

Primarily clerical and IT support; independently designed and built internal software tools to automate office workflows.

- Identified a gap in data protection and proposed and implemented a NAS backup system for patient records, now used for ongoing server file backups
- Designed and deployed an automated fax/email sorting and printing tool integrated with Microsoft Outlook, reducing daily staff processing time 75% (~20 min → ~5 min/day)
- Built a Python-based medical record parser using pytesseract OCR and the Microsoft Graph API to extract fields from incoming faxes and auto-sort records by office-defined priority

Software Engineering Intern | Office Medicine *May 2024 – Aug 2024*

- Developed a Python package integrating the OpenAI ChatGPT API into Office Medicine's software, allowing users to query drug codes, generic medication alternatives, and clinical information returned as structured, HTML-formatted output
- Determined the integration approach independently; delivered the package with tests and usage documentation so other developers could adopt it directly

PROJECTS

AI Resume Scoring Web Application | *Capstone Project* • Python, Flask, React, spaCy *2024 – Present*

- Architected and implemented a full-stack application that scores resumes against job descriptions, using spaCy for entity and phrase extraction and a sentence-transformer (all-MiniLM-L6-v2) to compute resume-to-job semantic similarity
- Built a deterministic rubric scorer with weighted category thresholds, bonuses, and deductions, scaled by the semantic fit score — keeping candidate quality and job fit separable, reproducible, and unit-testable
- Built the Flask REST API and React frontend, shipped through a CI/CD pipeline; led the development phase as primary engineer and wrote the majority of the production codebase

Video Aspect Ratio CLI (vidstretch) | Rust *2025 – Present*

- Built a Rust CLI (github.com/ameyeben/vidstretch) that batch-processes video aspect-ratio conversion in parallel via a concurrent wrapper around FFmpeg — includes a bounded worker pool for concurrent jobs, glob/recursive file discovery, interactive conflict resolution, and JSON reporting
- Focused custom engineering on the concurrency layer, CLI ergonomics, and reliability, building on FFmpeg's optimized scaler for the transform itself

Personal Portfolio Website | JavaScript, HTML/CSS, GitHub Pages *2026*

- Designed, built, and shipped a responsive personal portfolio site (ameyeben.github.io) presenting projects and experience; hand-written HTML/CSS/JS with anime.js for interface animation, deployed via GitHub Pages with Git-based version control

ACTIVITIES & ACCOMPLISHMENTS

- Founded and ran a summer software developer group, organizing collaborative projects and technical knowledge-sharing sessions
- Competed in two collegiate hackathons; Varsity Soccer — 2x All-District, All-Conference, District Champion
